Known Issues

If installing the drivers onto a PC for the first time, it may be necessary to re-run the installation process after the device has been connected as the USB drivers may not be enabled.

Solution: Will be fixed in next release.

Incorrect packet lengths generated when using increment or decrement modes for packet size *and* the size min/max values are set the same.

Solution: Will be fixed in next release.

New Functionality

Deep capture

Feature: Deep packet capture now available

ID, Sequence number and Timestamp

Feature: Optional timestamp field at end of packet for latency and jitter measurements

Multi-Burst Transmit Mode

Feature: Ability to transmit bursts of bursts now available

Packet per Second Transmit Rate

Feature: Packet rate can now be also set as a packet per second value

APG TCL API for Linux & Windows

Feature: TCL control now available

Unsupported Functionality

Receive Filters not available in this release

Solution: Will be added in a future release.

Run LED function not enabled in this release.

Solution: Will be added in a future release.
